

MESSAGE

INNOVATION REGARDING THE FUTURE...

Innovation continues to be fundamental to a more competitive industry creation.

Even in difficult times, SOPORMETAL continues to invest and bet in innovation, believing to have technically evolved products.

SOPORMETAL remains strong despite the economy and therefore has a good reason to believe that 2013 will be a prosperous year.

The first semester was completed in the new manufacturing facilities, where we have a fantastic array of productive innovations that makes the company's production capacity exponentially increasing.

With these changes the company's capacity of response of is much faster (JUST IN TIME), which nowadays is a key asset for any market.

This growth was also in the commercial area, which has been possible the entire team hard work, so we can say that we are present in 5 continents, which makes us very proud.

Bruno Cadima
General Manager

EDITORIAL

In this edition, we are going to make a quick approach of all the important novelties that occurred in the company.

Firstly we will emphasize the conclusion of our new facilities, which result of the sustainable growth and evolution of this company and its human resources. This evolution only was possible with the confidence of our customers in the quality of our products' range.

We also will present a new product – SOPOR-GREEN – brazing flux fluoride-free, which reflects our continuous investigation in ecologic products. Our fluxes are the most indicated to our brazing alloys because they are designed to reinforce good performances.

Finally, we are going to mention in our participation in CLIMATIZACIÓN 2013, an international exhibition dedicated to the sectors of Air Conditioning, Heating, Ventilation and Refrigeration, which took place in the grounds of Madrid IFEMA Fair in the end of this year's first semester.

We will conclude this newsletter with other brief news about the exhibitions where we are going to exhibiting in this year's last semester.

NEW FACILITIES

Company

NEW PLANT

2013 has already proved to be a year of important changes for Sopormetal Group.

During the first trimester, our new factory was concluded and we are now ready to overcome many of our limitations and to face new challenges. This goal could only be achieved with a strict fulfillment of the expansion strategy established three years ago.

The moving to our new facilities also meant big changes in the production process and product development.

Our production capacity was greatly improved. Also the quality of our products suffered improvement, specially due to the capacity to analyze our products every step of the way, ensuring only the best quality.

We now have an improved state of the art laboratorie fully equiped to analyze and/or develop high-end products capable of answering all our partner's demands. One of latest improvements of our product line is SOPOR Green, a new eco-friendly flux.

We could only reach this level thanks to the confidence that our customers and partners had shown throughout these 28 years of existence. To them, and to all the team that daily works for a better Sopormetal, our many thanks!

SOPOR-GREEN - New Brazing Flux

Sopor Green is a brazing flux free of boric acid and fluorides suitable for universal applications. It was specially developed for brazing alloys with wide melting range suitable for copper, brass and stainless steel brazing

The exemption of fluoride and boric acid improves safety in the workplace by eliminating all emissions of fluoride to the environment and to human health.

This flow is soluble in water and can be supplied in powder or paste.

WORKING TEMPERATURE : 550-850 °C

Highlights

CLIMATIZACIÓN 2013

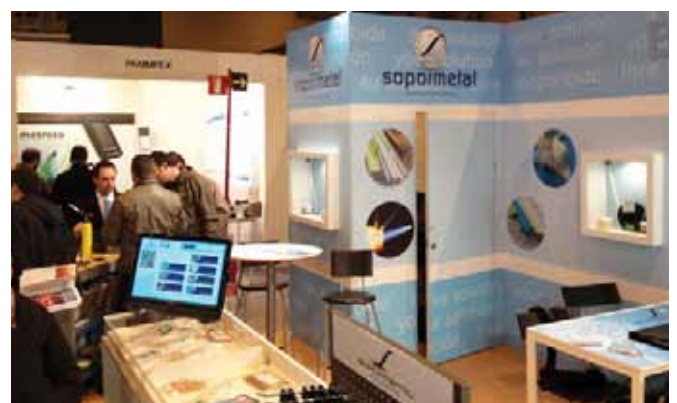

Recently took place in IFEMA the CLIMATIZACIÓN exhibition, which has shown us how our sector is today.

We have reached several conclusions. The first, is that adjustment to the markets is happening but it is still hard, the second, is that despite this, the participating companies, certainly much less than in previous years, have been able to survive even in such adverse conditions, due to its high adaptation capacity, first coming to foreign markets and exporting and secondly improving their production technologies and controlling costs.

With this, SOPORMETAL SPAIN, as part of SOPORMETAL INTERNATIONAL GROUP, also adapted to the needs that our clients demand. Providing support viable and cheaper technical solutions to our customers, so that they are themselves more competitive in their production.

Finally, we must highlight that we have found a large affluence in our booth, whether small local distributors or installers of different sectors.

For this reason and as a summary of our second participation in this show, we can say that it has been positive, very clearer within the sector and an investment towards the future with a more sustainable and credible growth. It is a first step in this new industrial and commercial world that is taking shape around us.

Short News

8 – 11 October 2013
Moscow, EEC Sokolniki

COME VISIT US AT
Hall: 4.1 Stand: B305

WELDEX 2013

For the first time Sopormetal will be present at WELDEX - International exhibition for welding materials, equipment and technologies.

This event will take place from 8th to 11th of October at ECC Sokolniki, Moscow and is the leading exhibition in Russia and CIS countries in the welding technology and presents the last novelties of welding equipment, advanced technology and materials for the building, oil and gas, engineering, metallurgy and other industries.

Our participation in this event will help to consolidate Sopormetal's presence in Russia and CIS countries markets.

We will be exhibiting in hall 4.1, Stand B305.

The BIG 5 - 2013 Dubai World Trade Centre

For the second time Sopormetal will be present at THE BIG 5. This event will take place from 25th to 28th of November at Dubai World Trade Centre and is the largest and most important event of the construction sector in the Middle East, and also covers the sectors of Ventilation, Air Conditioning, Heating and Green Products.

This participation represents the consolidation of Sopormetal in the Middle East market.

We will be exhibiting on Stand 2-F67.
